

## Flat Bottom Silo Conversions

Are you tired of the sweaty, back breaking shovelling of residual grain out of flat bottom silos?

Are you tired of the loss of grain due to the lack of vermin and weevil control?

Are you tired of the choking dust causing breathing problems?

Become a wise farmer and contact Leon Cook Silos to remedy this problem.

Leon Cook Silos will travel to your site, lift your existing silo and install a new elevated base beneath it.

By converting your existing flat bottom silo to an elevated silo you will now become more efficient and effective. The completed work will become an added asset to your property.

If required the silos can be transported to another location.

This type of work could be a total tax deduction to you.
