

New Elevated Silos

Leon Cook Silos supplies and delivers on farm, a vast range of elevated transportable silos to suit most types of storage, either grain, pellets or fertilisers.

Both bottom cone and sidewalls of each silo are made of heavy 18 gauge all-galvanised material.

Additional struts and webbing add support and strength to the base.

Ladder cages and sidewall view glasses allow the farmer to peruse the silo storage level from the ground.

On-ground top manhole opening lids are also included in the silo construction in compliance of Workcover regulations.

The sidewall view glasses plus the on ground opening lids helps to discourage the need to climb the silo ladder.

Fertiliser silos are painted internally for added protection.
